

Battle of cities for pizza

- I have taken five cities namely NY , Chicago , Jersey city , San Francisco and Boston
- Here I am going to look for the most dense city with pizza place so that tourist can decide where they want to search their Hotels
- Here , I m going to use Foursquare API to look for the venues near to these 5 cities
- Then I will be going to show u individual maps for these cities so that one can easily find which city is most dense

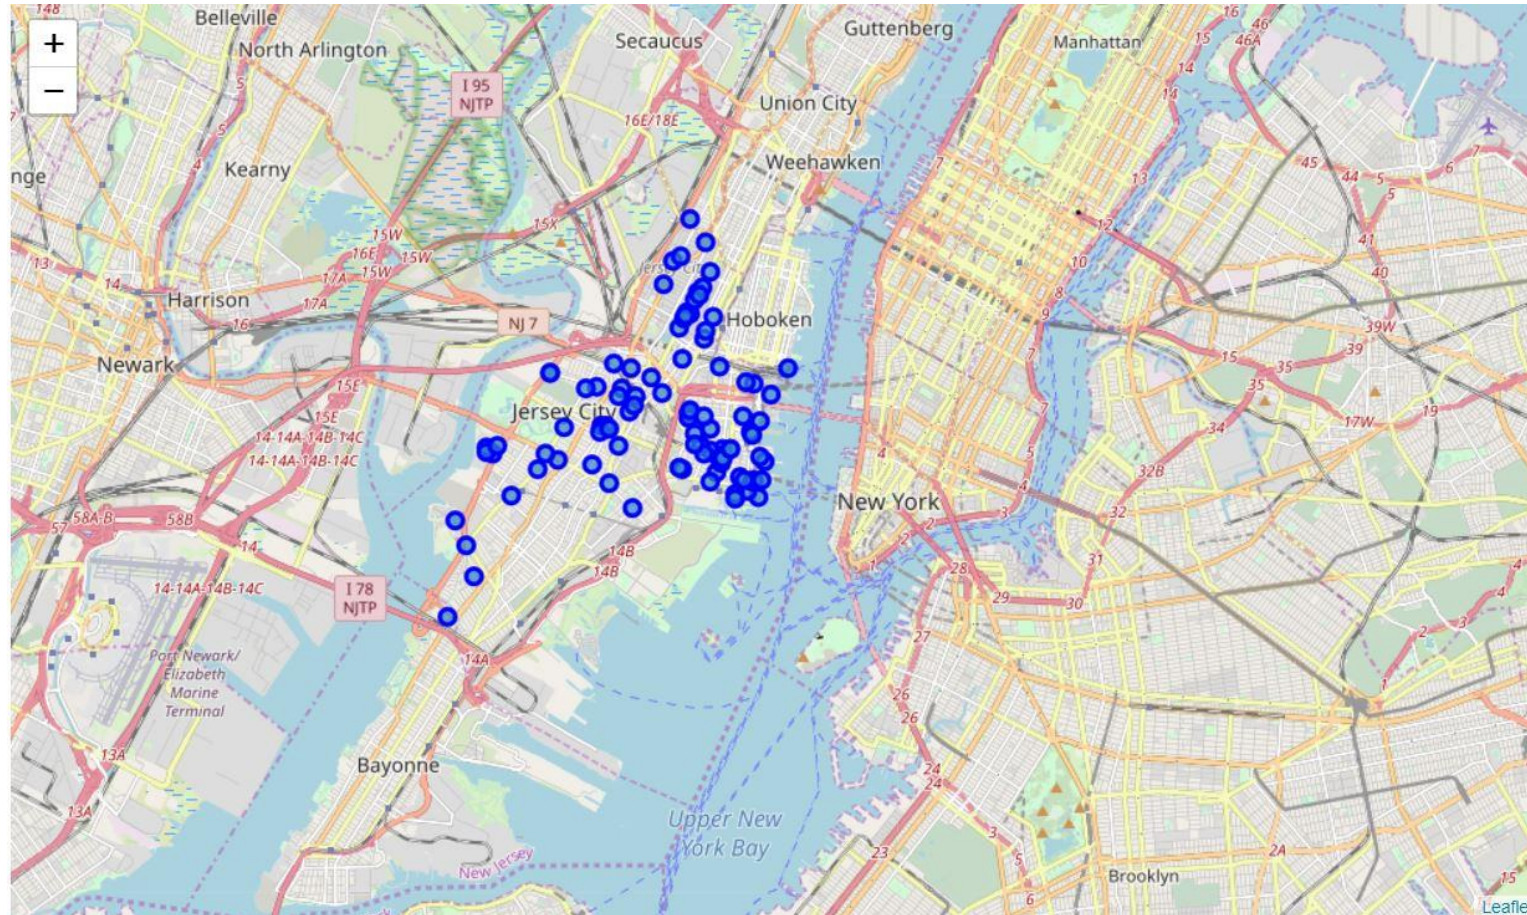

FOR NY

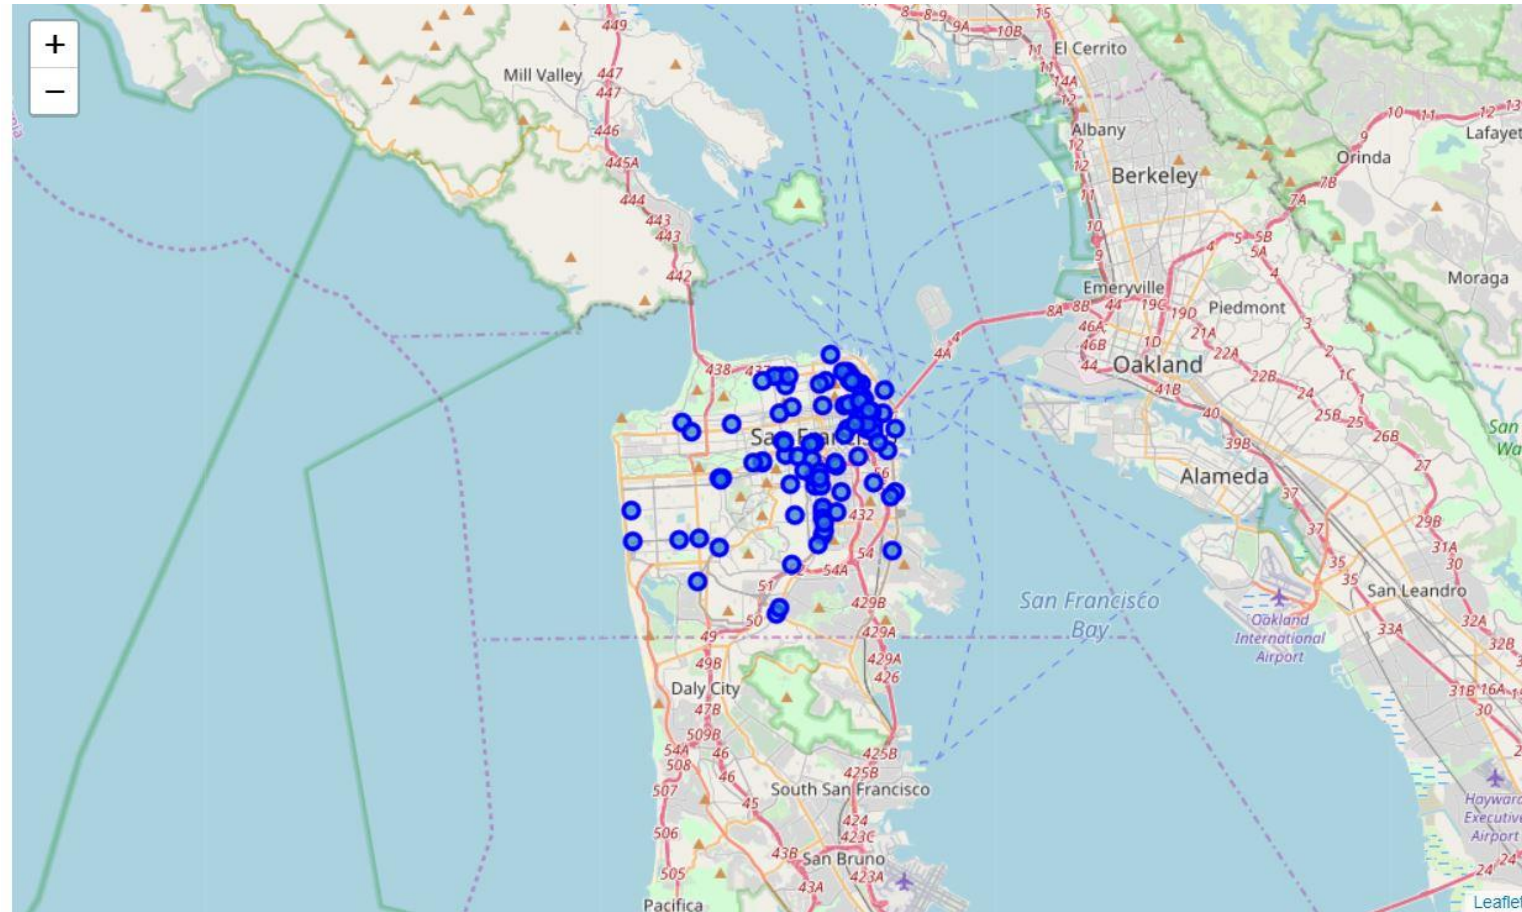

FOR CHICAGO

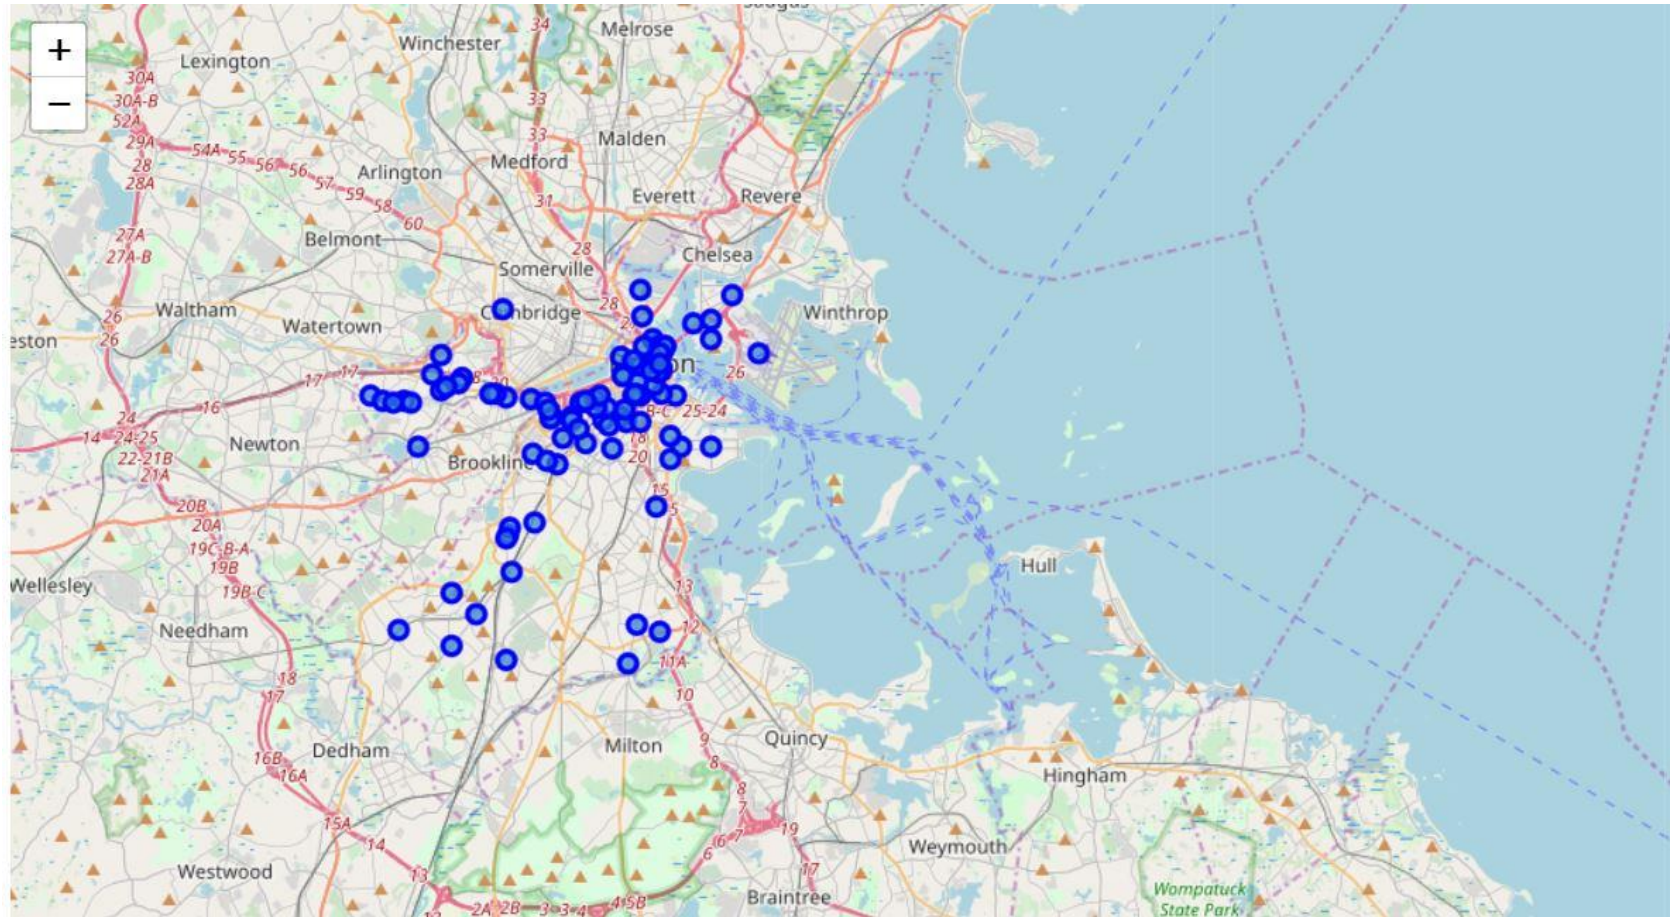

FOR JERSEY_CITY

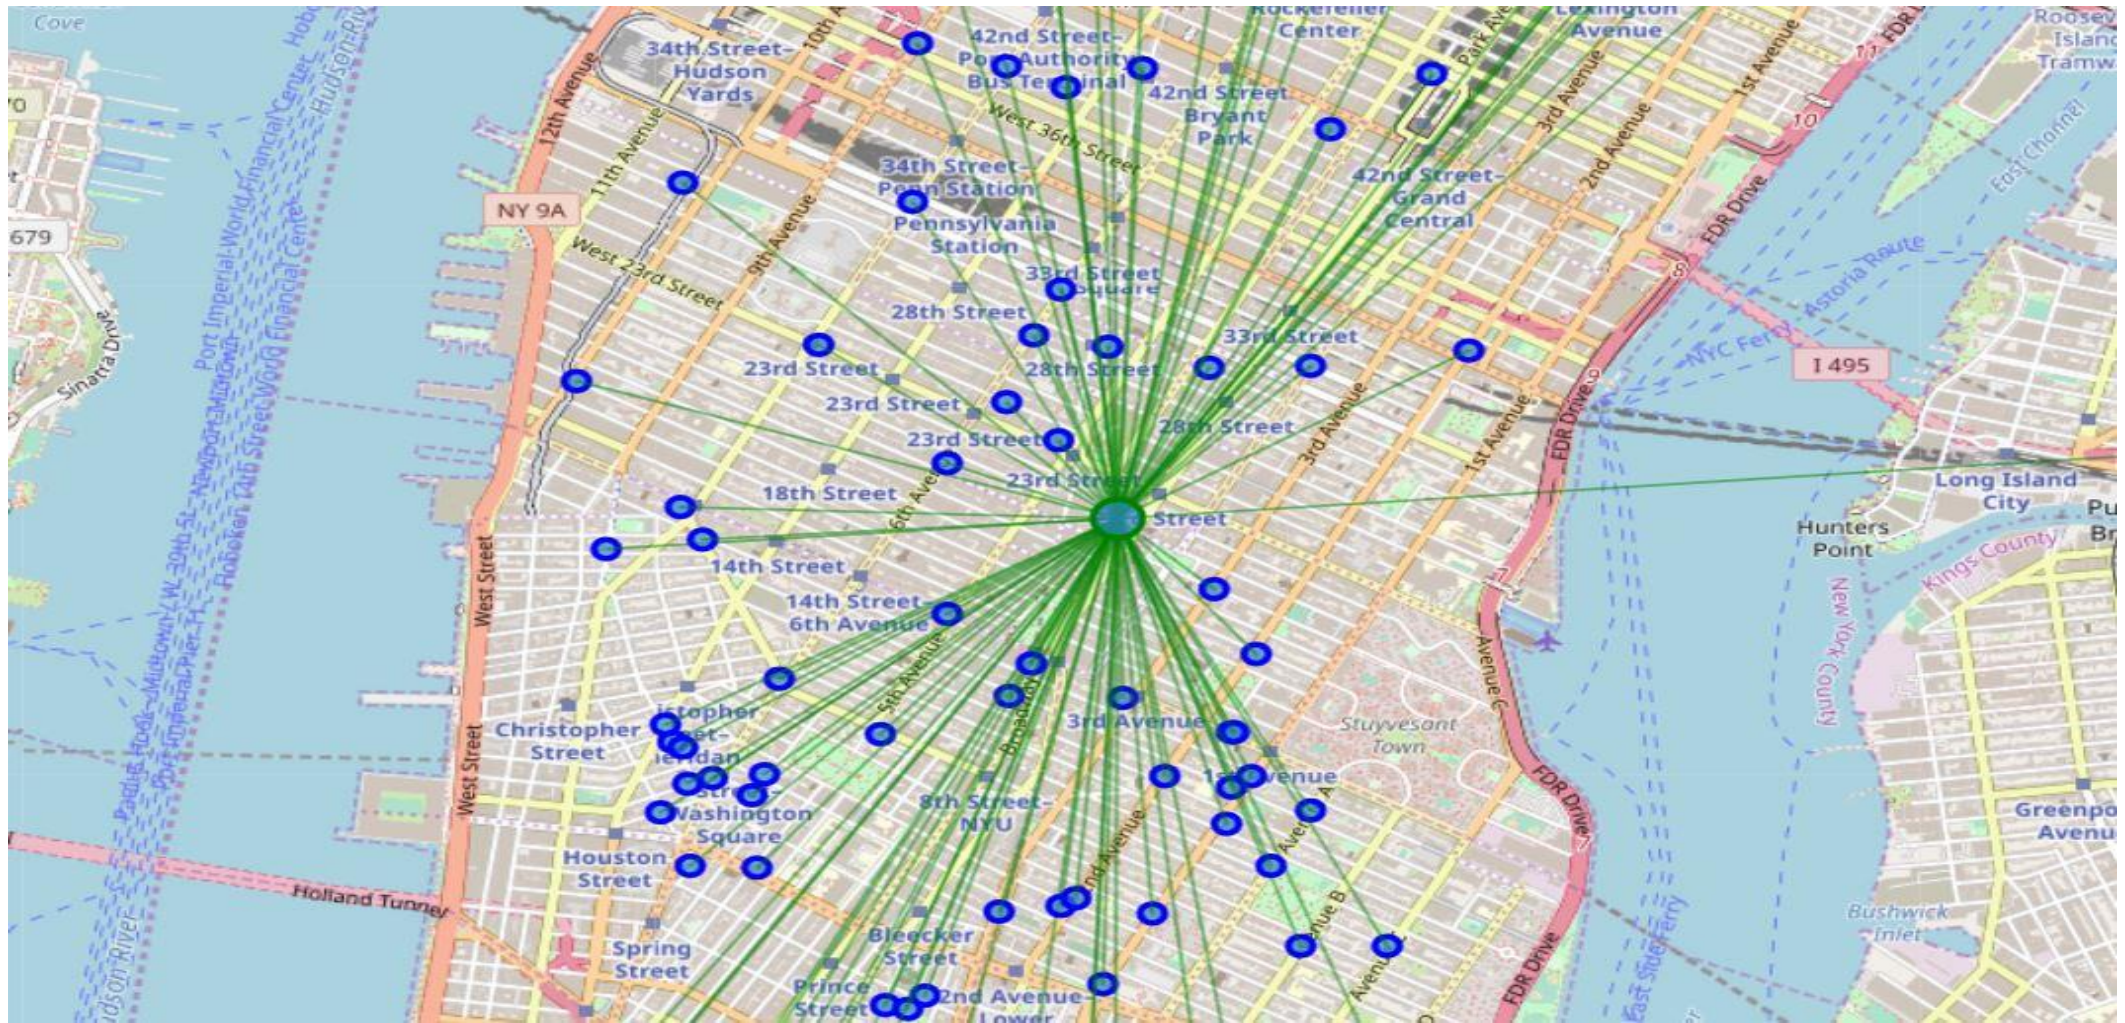

FOR SAN_frANCISCO

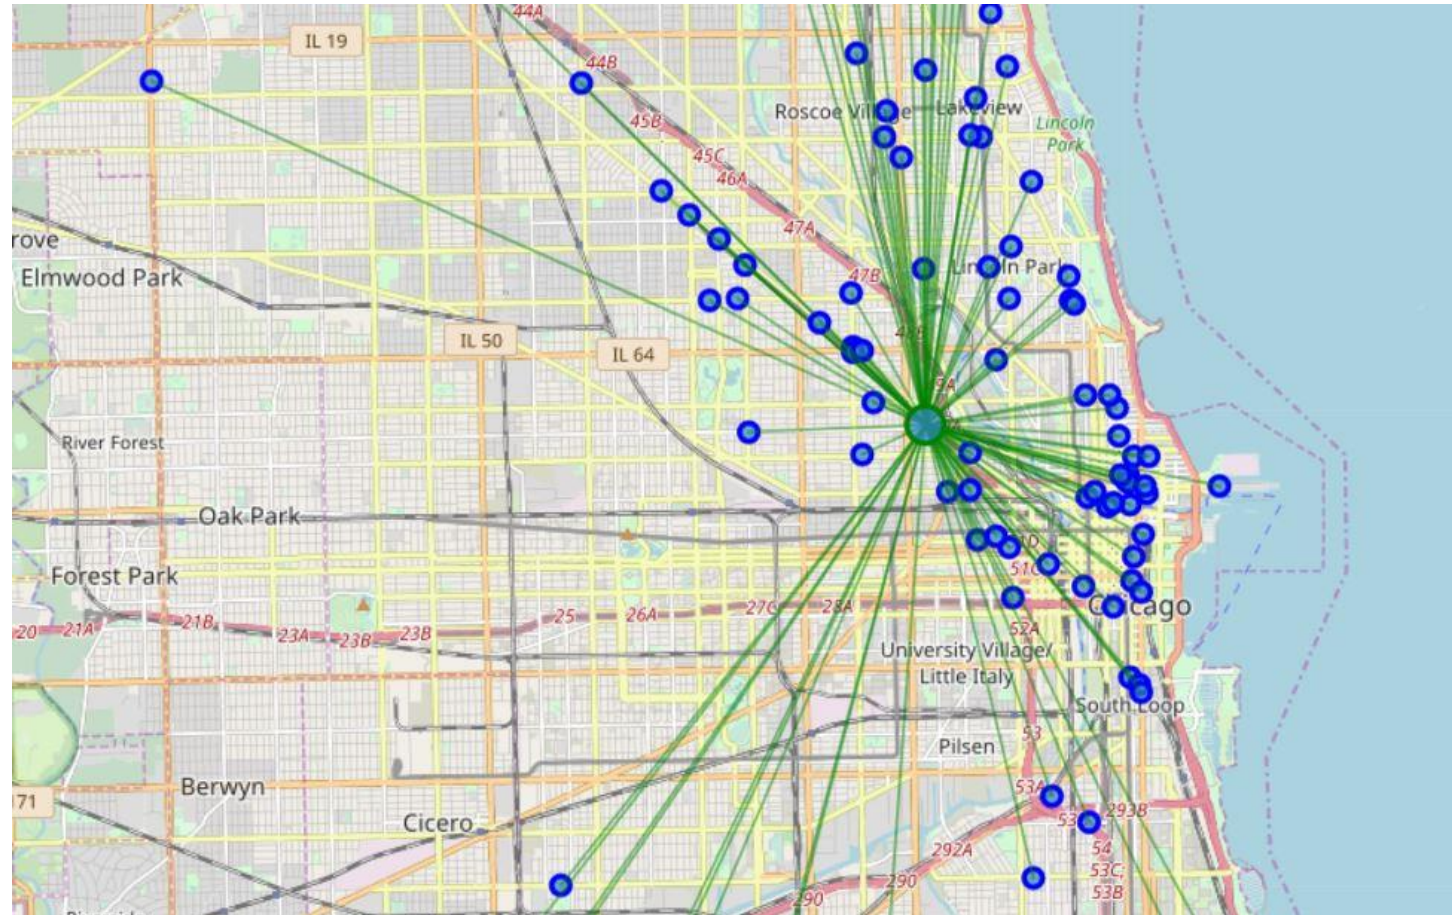

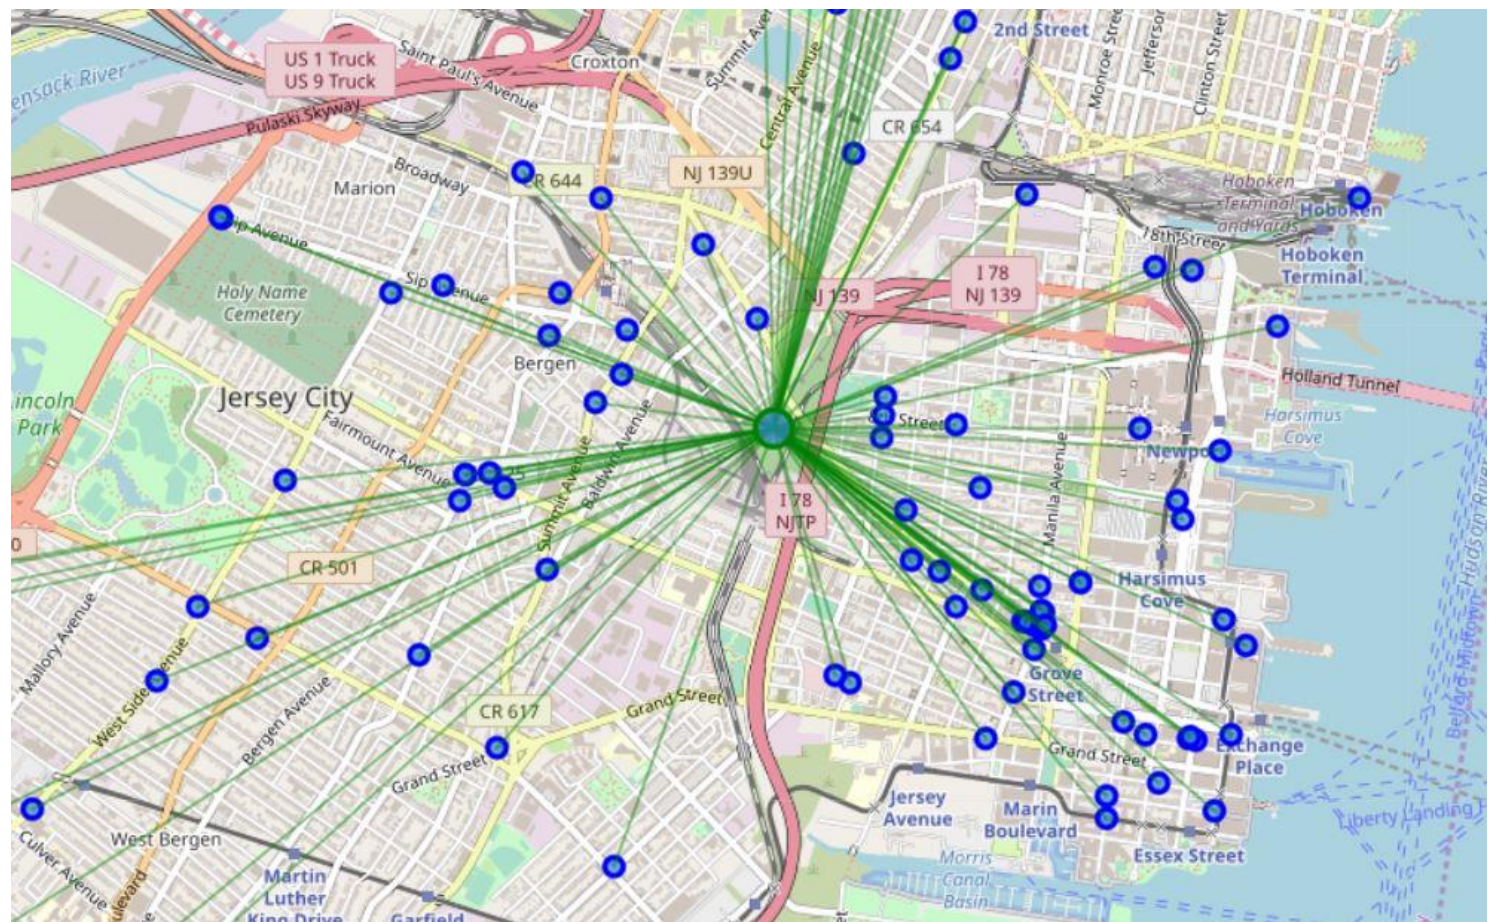

FOR BOSTON

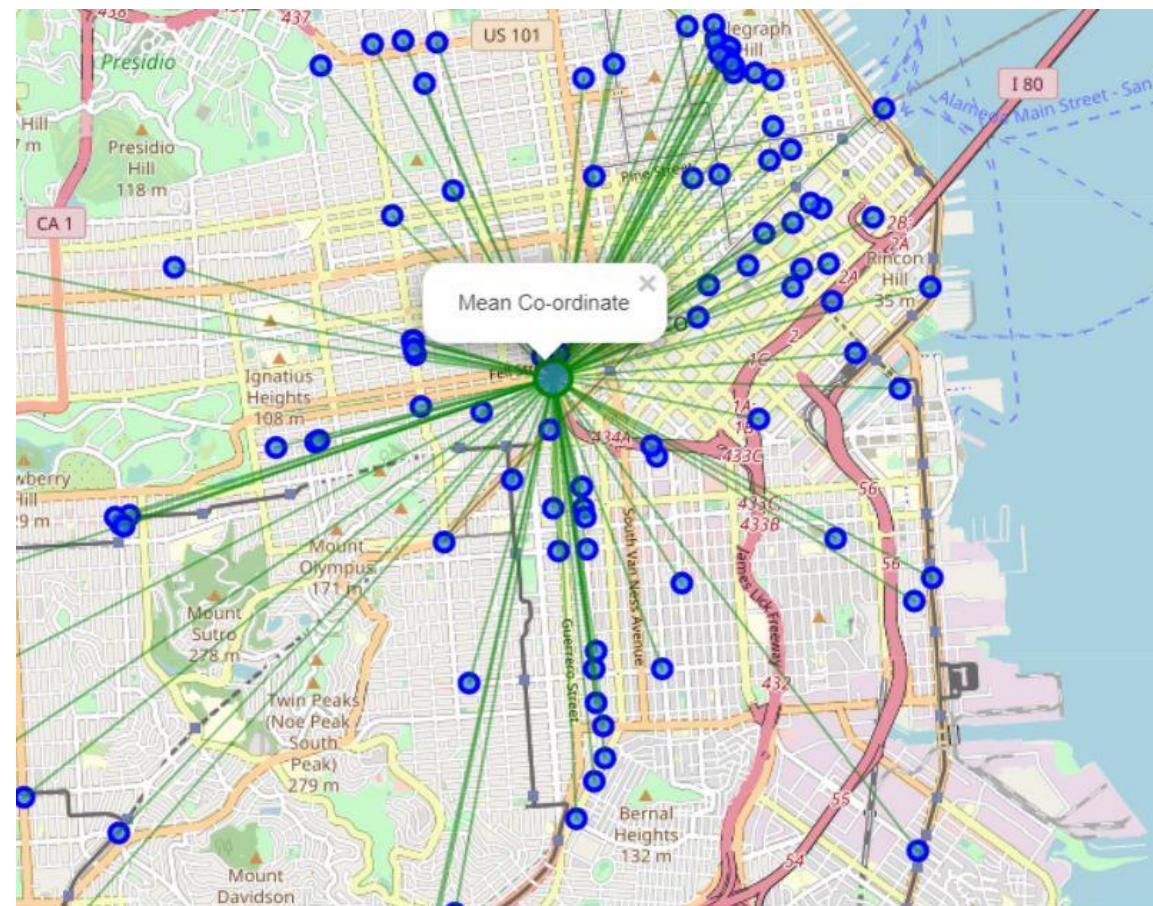

- Now , we are going to take the mean of all the pizza places for every city to determine which neighbourhood can be most nearer to all the pizza venues
- I 'll be attaching mean map graph for cities namely NY ,CHICAGO,JERSEY_CITY and SAN_Francisco respectively.

CONCLUSION

- By looking at the maps we can easily say that NY has most dense pizza places
- But one important point to note that distance b/w NY city and Jersey city is not much and also jersey city is also good populated with pizza places
- So , we can assume that Jersey city can also be good place for tourist to check their hotel
